How often have you wished you could control time?

This is your chance to make that wish come true, in the most hilarious way. Three youngsters travel to the past and must be extremely careful not to change anything because it could spell disaster for the future they came from. A refreshing visual show, adapted to the level of young students and full of recognisable elements and situations for children. We predict the best English lesson of the year.

> Perfect for...

Basic level of English, wishing to take part in a dynamic, fun and immersive exercise, working with short phrases, simple past and future tense and probabilities, all of it while enjoying a live show.

> Don't miss...

Crazy situations full of physical comedy.

> Did you know?

Einstein believed that it was possible to travel to the future, with speed being the key factor. This was proven scientifically by Sergei Krikalev, who spent three years travelling at 27,000 km/h in the MIR space station, allowing him to advance into the future by a tiny fraction of time.
